November, 2020 Vol. 15

*ERDIP is adopted under the taxiway of Changi Airport, Singapore!*

At Changi Airport in Singapore, one of the largest hub airport in Asia, ERDIP - GENEX DN300 was adopted as firefighting pipeline to be buried under the taxiway around the runway and construction work is currently underway.

If the pipeline is damaged and water leaks, it will have a great impact on operation of the airport. GENEX was chosen as a pipe that is not damaged even if there are frequent repeated vibrations during the landing of airplanes.

Changi Airport, which is scheduled to be expanded in the future, is considering adopting GENEX in the future as well.
